PART 1

Quick Start

1

Requirements

- ▶ TeX Live 2023+ (Overleaf works too)
- ▶ Engine: **XeLaTeX**, run twice
- ▶ No fonts to install — everything comes from the TeX distribution

Where to edit

All content lives in `main.tex`; cover info is set by `\title` and friends at the top of the file.

Overleaf

Upload the Release zip → set the compiler to **XeLaTeX** → compile twice.

Auto-generated

Cover, section pages and the thanks page are generated by the theme — no hand-writing needed.

Compile locally (twice)

```
latexmk -xelatex main.tex
```

⚡ *Cover, section and thanks pages are automatic — just fill in the title block.*

The Chinese University of Hong Kong

PART 2

Layout

2

Auto-generated layouts

- ▶ **Cover:** purple emblem & wordmark + lavender title band
- ▶ **Section pages:** inserted by `\section`
- ▶ **Thanks page:** one line, `\cuhkthanks`
- ▶ **Header:** title + gradient rule + gradient wordmark

Frame titles & subtitles

Every frame title takes an optional subtitle:

```
\begin{frame}{Title}{SUBTITLE}
```

The subtitle appears as small grey text next to the title; uppercase acronyms look best.

Pure white content pages

Content pages carry no background decoration — ideal for dense academic material; the cover and section pages are full-bleed designs with generous whitespace, on a 16:9 canvas.

⚡ *This page shows the header style: title + gradient rule + gradient wordmark.*

Two columns: minipage + hfill

Place content side by side with `minipage[t]`; start each column with `\vspace{0pt}` for top alignment and separate columns with `\hfill`.

Any column ratio

Widths combine freely: $0.475 + 0.475$, $0.3 + 0.3 + 0.3$, $0.6 + 0.38$, ... and mix `cuhkbox`, `imgcard`, charts, etc.

Column one

For three columns, $0.31 + 0.31 + 0.31$ works well.

Column two

Start every column with `\vspace{0pt}`.

Column three

Unequal heights align at the top automatically.

⚡ Remember: put `\vspace{0pt}` before the first element of every `minipage[t]`, otherwise tops will not align.

PART 3

Components & Figures

3

cuhkbox: the all-key box

Seven colour keys, all mapped onto the purple ladder: blue orange green purple red gold gray, used as `\begin{cuhkbox}{key}{Title}`. Purple title bar + soft lavender body + rounded corners, a single visually consistent family.

Badges: `\badge`

Badges tag inline information: one two
key point

Highlights: `\hl`

Emphasise body text with **purple bold**; on dark backgrounds such as takeaway the highlight switches to a light colour automatically.

⚡ takeaway: a full-width gradient bar for the one-sentence conclusion of each page.

First Prize

Sample competition

Sample description · team members

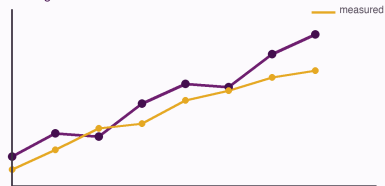

⚡ Stat cards stack with `\hfill`; their width is controlled by `\cuhkstatwidth`.

Accuracy across kernels

Demo figure A: `imgcard` adds frame and caption

Scaling with thread count

Demo figure B: width around `\linewidth`

Mixing figures and text

Combine a figure column with a text column: `imgcard` on the left, a `cuhkbox` or `list` on the right; the first `imgcard` argument controls the content width.

⚡ *Two figures side by side: two `minipage[t]` each holding an `imgcard`, joined by `\hfill`.*

PART 4

Code & Mathematics

4

Python example

```
def fibonacci(n: int) -> int:
    a, b = 0, 1
    for _ in range(n):
        a, b = b, a + b
    return a
# keyword / comment / string all have their own colours
```

Styling notes

- ▶ Built on listings: ice-lavender background + thin frame
- ▶ Keywords in dark plum bold; line numbers optional

Tips

Use the bundled `cuhkcode` box — no `[fragile]` needed; plain `lstlisting` also works (add `[fragile]` to the frame then).

⚡ *listings ships pre-configured — just use the `lstlisting` environment.*

Classic inequalities and derivations:

Common inequalities

$$\frac{a+b}{2} \geq \sqrt{ab}, \quad \forall a, b > 0 \quad (1)$$

$$\sum_{i=1}^n i^2 = \frac{n(n+1)(2n+1)}{6}, \quad n \in \mathbb{N} \quad (2)$$

Inline math keeps the body rhythm: gradient $\nabla_{\theta} \mathcal{L}(\theta)$, attention $\text{softmax}(QK^{\top} / \sqrt{d}) V$.

⚡ *Math is serif (onlymath), contrasting with the sans-serif body.*
